

Your Child and Psychiatric Medications

Your Child and Psychiatric Medications

Medication can be an important part of treatment for some psychiatric disorders in children and youth. Families should be provided with complete information when medication is part of their plan of treatment. Consistent evaluation and monitoring of the medication by a physician is also necessary. Families and their child need to be fully informed about medications. Your child should be included in discussions about their medications in a way they understand.

Included in this brochure are some questions regarding your child's medications. Families should ask these questions before their child starts taking psychiatric medications.

If you still have serious questions or doubts about medication treatment, you should feel free to ask for a second opinion.

Funded by a grant from the Substance Abuse and Mental Health Service Administration.
